

Stuart

Research Scientist from Somerset

What do you do?

I make a tiny bed of nails which we use to inject medicines into cells. Each needle is a thousand times smaller than a human hair.

Why do you do it?

I'm fascinated by how we can use science and engineering to help us understand the world around us, and come up with new ideas that help improve life for lots of people. I also love learning new things.

Where are you from?

I grew up in Crewkerne, Somerset.

How did you become a scientist?

I studied GCSE Triple Science at school, then A-Level Maths, Physics, Chemistry and Biology. I then went to university in London to study Physics, and stayed working there after I graduated.
